

SLOPE STABILITY

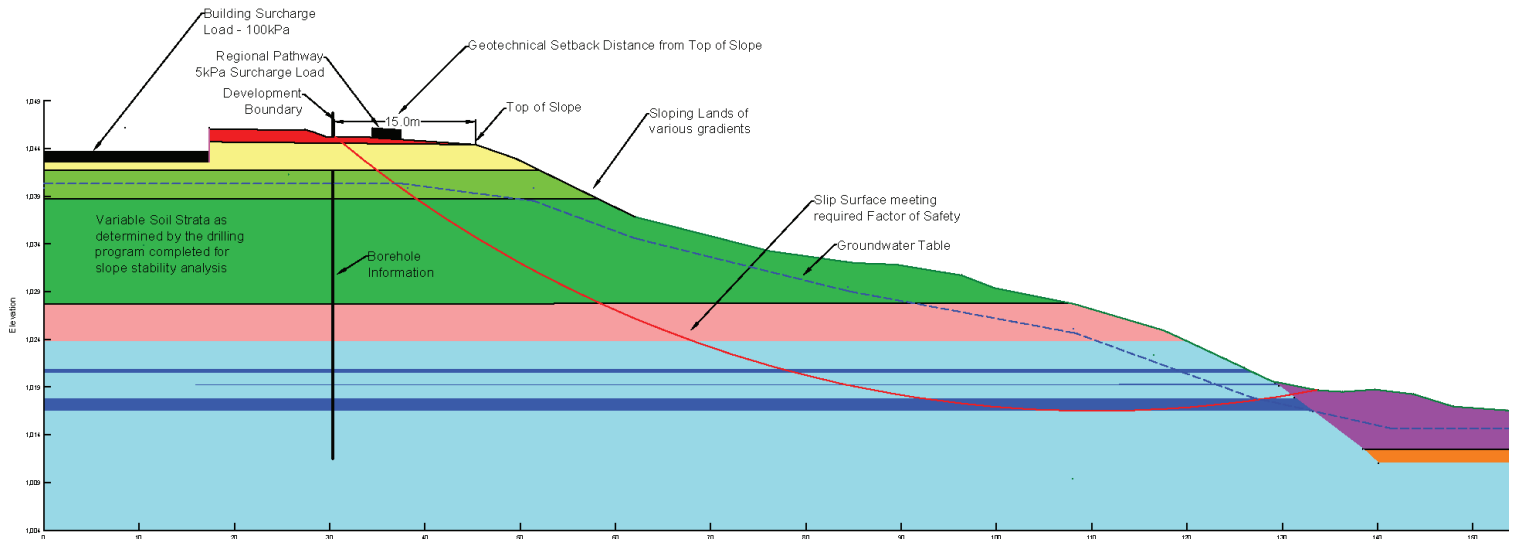

The diagram below is a cross-section (side) view of the land where Cedarglen Living's Mintoft Place on Blackfoot Trail development will be situated. It illustrates the setback distances, borehole information, and development boundary to confirm the slope stability for this project.

The development boundary ranges from 12-43m from top of slope (shown below as 15m) to ensure required setback.

The slope stability evaluation is based on current site contours of the slope, design contours, subsurface soil conditions, groundwater information, and understanding the development lands.
